**EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

2. The application has been amended as follows:

In claim 4, line 1, change "Unchanged" to --Currently Amended--.

Please add the abstract set forth on the following page:

A data processing arrangement (1) comprises a first processor (PROC1) for providing successive sets of input data, a second processor (PROC2) for receiving successive sets of output data and a memory system (2) comprising a plurality of memory circuits (MEM) for storing the input and output data. According to the invention, the data processing arrangement further comprises a master controller (MCP) for setting up the memory system by means of control commands (CC) associated with a set of input data and a set of output data. These control commands are received in the memory system by a control unit (MCU). When a data (Di) from the set of input data is provided by the first processor, this control unit selects, on the basis of the control commands, a first memory circuit and generates a write-address (AD\_W) in said first memory circuit. In the same way, when a data (Do) from the set of output data is required by the second processor, the control unit, on the basis of the control commands, selects a second memory circuit and generates a read-address (AD\_R) in said second memory circuit. Thus, there is no need for the processors to provide addresses when they require or send data therefore leading to a simple data processing arrangement.
